# Sundays are for Studying

2013-06-30 BY GENE

For a while now, I have been studying the properties of physical knots with respect to tightening. It all started when I saw the Terry Moore TED talk on [How to tie your shoes](#) and the weak vs strong form of the simple shoelace knot. Today I found this handy paper: [A 2-Chain Can Interlock with an Open 11-Chain](#)

It may sound super boring and possibly intimidating, but it is short and has pictures!

Yay learning++ :-)
