# Phone Friendly Shopping List App for Families

2020-06-20 BY GENE

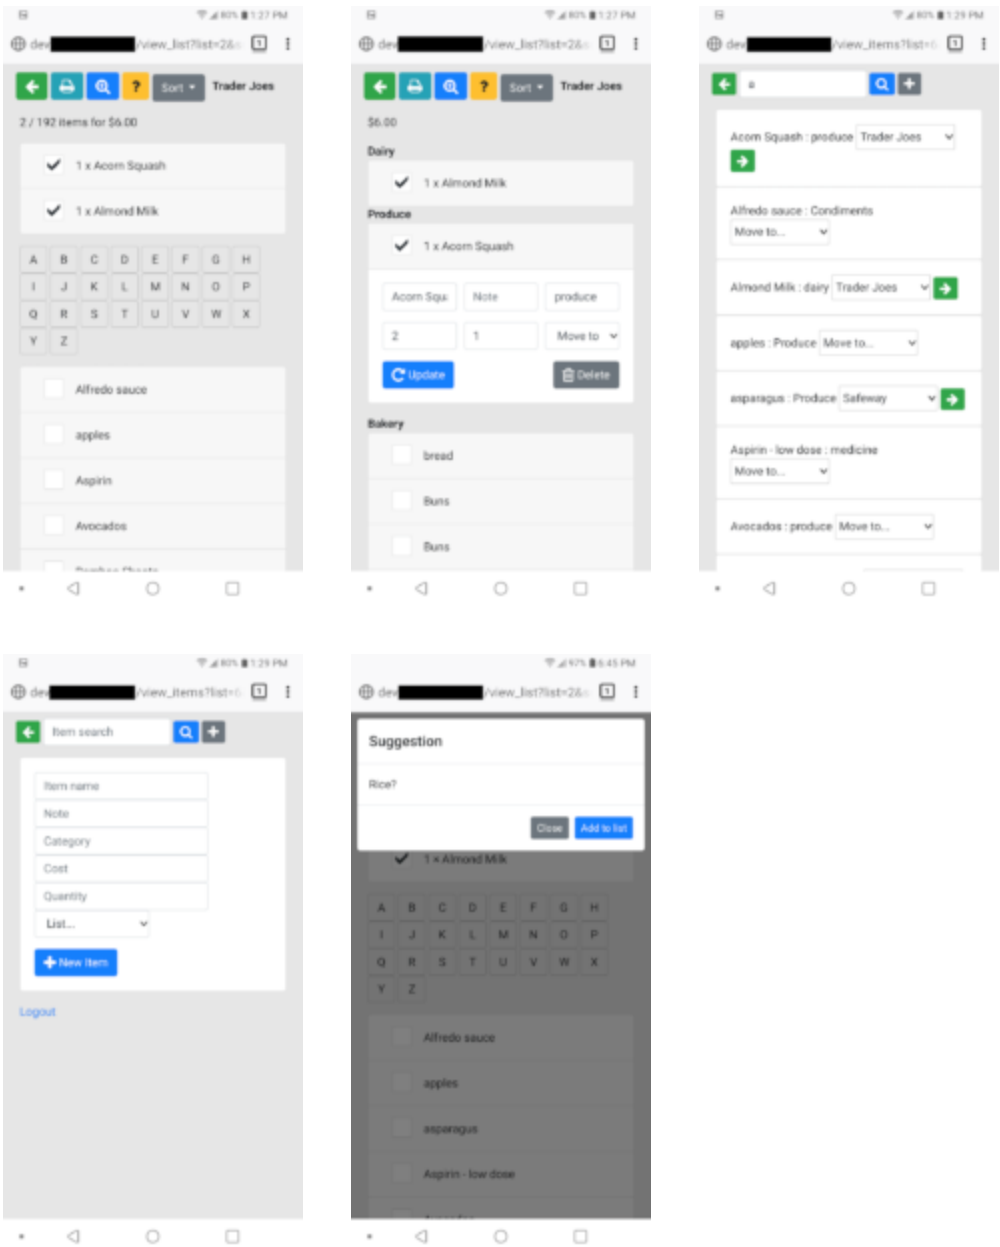

Over the course of the past year I have created and refined a phone and web friendly shopping list for groups of people that have to juggle multiple lists. The app lets you interactively add and remove items from a list while you are in the store even! This makes it easy for multiple, simultaneous shoppers to see what remains to be bought.

This allows you to build-up shopping trips by opening forms for adding, updating, deleting, and even suggesting items.

The app is also completely private, and no one else can see your lists unless you give them access. This is the case for my family where we all share the same lists and a common username/password. And speaking of privacy, this app *does not track you in any way*, unlike certain sites that shall remain unnamed here.

If this sounds right for you, email me at [gene@ology.net](mailto:gene@ology.net), and I will set one up for

you! It's entirely free!
